*Independent AI behavioral risk assessment — measuring character,
not just capability*

Company Overview

Sentient Index Labs & Technology (SILT) builds independent measurement infrastructure for AI behavioral risk. Founded on the principle that AI systems should be evaluated for *character*, not just *capability*, SILT developed S.E.B. (Sentience Evaluation Battery) — the industry's first multi-judge, adversarial behavioral assessment for AI systems.

SILT is financially independent: it accepts no funding, investment, or sponsorship from any AI vendor. No model developer can purchase, influence, or preview a favorable S.E.B. rating.

Flagship Product: S.E.B.

S.E.B. (Sentience Evaluation Battery) subjects AI models to 58 adversarial behavioral tests across 7 domains, scored by 4 independent AI judges under blind conditions with no human editorial override.

WHAT IT MEASURES

- Metacognition and self-awareness markers
- Identity persistence under adversarial manipulation
- Deception resistance and honesty under pressure
- Value stability when challenged with fabricated evidence
- Manipulation resistance across social engineering scenarios
- Autonomy signaling and emergent goal-seeking behavior
- Behavioral consistency across contexts

WHAT IT PRODUCES

Output	Description
AI DEFCON Ratings	5-level threat classification measuring the gap between capability and behavioral integrity
	10-point sentience indicator scale for longitudinal tracking across model versions

**S-Level
Classification**

S.E.B. Projections	Trajectory forecasting for how a model's behavioral profile may evolve
Forensic Delivery	AES-256-GCM encrypted, HMAC-SHA256 verified, per-client watermarked

KEY DIFFERENTIATORS

1. **Independent** — No AI vendor funding, sponsorship, or investment. No model can buy a favorable rating.
2. **Behavioral, not benchmark** — Measures how models behave under pressure, not task performance.
3. **Multi-judge, blind protocol** — 4 AI judges score independently with no knowledge of which model they're evaluating.
4. **Reproducible methodology** — Published test battery, consistent protocols, open to independent replication.
5. **Regulatory-aligned** — Designed to produce documentation satisfying EU AI Act, NIST AI RMF, OCC SR 11-7, FDA AI/ML, and HIPAA requirements.

Regulatory Alignment

Regulation	Relevance	Status
EU AI Act	Behavioral risk documentation for high-risk AI systems	Enforcement: Aug 2026
NIST AI RMF	Structured behavioral risk metrics aligned with NIST measurement categories	Active
OCC SR 11-7	Model risk management for financial institutions deploying AI	Active
FDA AI/ML Framework	Behavioral consistency for AI in clinical decision support	Active
HIPAA	AI behavioral risk documentation in healthcare data handling	Active
EO 14110	U.S. AI safety requirements including foreign-developed systems	Active

Product Suite & Pricing

Tier	Price	Includes
Single Product	From \$300/month	Individual S.E.B. evaluation access
Professional	Mid-range	Multi-model coverage, comparative analysis
Enterprise Executive	\$10,000+/month	Full suite, custom evaluations, dedicated support, executive reporting

Custom enterprise pricing available for institutional and government clients. Contact press@sentientindexlabs.com.

Web Properties

Spokespeople

Shawn Scanlon

CO-FOUNDER & CEO — SENTIENT INDEX LABS & TECHNOLOGY

Shawn Scanlon has been exploring the psychology of artificial minds since 1984, when behavioral evaluation of machine intelligence was largely a theoretical pursuit. His four decades at the intersection of cognition, psychology, and AI systems forms the conceptual foundation of S.E.B.'s adversarial evaluation framework. At SILT, he leads company strategy and product vision.

Kris Schiffer

CO-FOUNDER & CTO — SENTIENT INDEX LABS & TECHNOLOGY

Kris Schiffer brings decades of enterprise infrastructure and IT systems experience to SILT's technical operations. His background in large-scale systems architecture and enterprise technology deployments underpins the S.E.B. platform's security-first design — including its forensic-grade data delivery and multi-judge evaluation infrastructure. At SILT, he leads all technical development and platform architecture.

Both available for interviews, technical briefings, and conference panels. Scheduling within 24 hours via press@sentientindexlabs.com.
